Demo Day & Presentation Skills

Time to show off

Your Journey into Platform Engineering

- **Containerized** applications with Docker

- **Automated** deployment with CI/CD pipelines

- **Managed** infrastructure with Terraform

- **Monitored** everything with observability

What I want to see

- HLD - What have you built? Show me visually, tools like draw.io, excalidraw

- Documentation - Any key things I should know if I had to support your new application once it goes live?

- How does your pipeline work?

- A mini demo, talk us through how you built this, the main challenges you faced, what you might like to explore or do differently next time
